

CATALOGUE

**Real changes are born
of a willingness
to look further.**

*"I have always wanted to create a
pocket door system which is easy
to install and will last forever.*

*I am inspired by the idea of
constantly improving the
performance of this product,
because I want to satisfy everyone
who sells it, installs it and uses it.*

*This is what drives me and
enables me to always look
further."*

Luigi De Faveri
Owner of ECLISSE

OUR FUTURE IS MADE OF PEOPLE

FOR 30 YEARS WE HAVE BEEN
LOOKING FURTHER WITH YOU

At ECLISSE we have a strong orientation towards people, innovation and continuous improvement.

Ours is a story of listening and study, of continuous work on the product, of incessant search for quality, in order to acquire more and more expertise in the field.

Look further the state of the art to imagine the innovation no one has thought of yet, to generate the next generation of technologies that will improve the functionality and aesthetics of our products.

We are driven and stimulated by the ability to dream of designers, architects and individuals who love interior design, but also by the technical needs of builders and installers. The challenges presented by their needs and visions are the driving force behind our growth.

Looking Further is the reflection of our philosophy: a promise we repeat every day, a commitment to see what others do not see, the meticulous attention to detail, the desire to take nothing for granted. The synthesis of our work, what differentiates us.

This is the veneer of ECLISSE.

TOWARDS PERFECTION

POCKET DOOR SYSTEMS DESIGNED TO WORK PERFECTLY

The hallmark of our products is uncompromisingly high quality.

We maintain a constant contact with users, designers and installers, and we use their insights constantly to develop new ideas and extraordinary solutions.

Our objective is to develop and manufacture pocket door systems which are simple to install, functionally flawless and easy to maintenance.

We set out to revolutionise the concept of the sliding pocket door system and so enable any type of frame to be hidden. We also decided to redefine the role of the frame for flush hinged doors.

Choosing ECLISSE is to choose a reliable, sturdy, innovative product.

A REASONED CHOICE

GETTING MORE SPACE

When you use a hinged door...

Compared to conventional hinged doors, sliding pocket doors offer technical details in every living space. It is estimated that in an average house, more than 8% extra space can be freed by the use of sliding doors; that's 8 sqm extra space in a 100 sqm apartment!

ECLISSE developed an elegant, practical alternative to hinged doors: a framework that forms part of the wall and allows your doors to slide effortlessly inside the wall. Sliding pocket doors take up no living space. Whether you are designing new-build or refurbishment this is a modern and intelligent way to exploit the space using the latest development in door closures. Also, ECLISSE frames can host any conventional door of your choice. Your style is up to you!

Use an Eclisse sliding door and...

The frame is made from top quality materials and components to give a long, trouble-free life and the patented extractable track system can be removed at any time for extraordinary maintenance without breaking into the wall.

ECLISSE has been manufacturing frames for sliding pocket doors since 1989 and it is the largest worldwide producer of these integrated systems.

This has been achieved through a constant technical innovation with high performance materials and a finished product that is easy to install and gives long term customer satisfaction.

The product range offers a wide variety of applications including single doors, double doors, telescopic sliding doors, side by side doors and even curved doors!

8m²

An extra 8 sqm of space

Reasons not to use a hinged door

- Restricts your planning options
- Wastes lots of space
- Difficult to use in small areas

Reasons to choose ECLISSE

- More freedom in your layout
- Uses all the available space
- Opens up smaller areas

A SOLUTION FOR EVERY NEED

OUR PRODUCTION OF POCKET AND HINGED DOOR FRAMES

Since its beginning, ECLISSE has been and remains dedicated to advancing the design of the sliding door systems. The sliding door frame was not considered to be a simple structure for holding a door, but rather a complex system which must above all communicate with the surrounding structure in which it is fitted.

This realisation led to the development of a range of specific sliding pocket door systems for solid and stud walls.

The solid wall versions are immensely strong, and serve as more than a simple replacement for brickwork. They are capable of forming an integral part of the structure.

On the other hand, versions for stud wall have an open, lightweight but solid structure which can be perfectly incorporated in the studwork.

Our approach to developing frames for hinged doors is totally unique: a single universal construction designed for use with all wall types.

With one eye permanently fixed on technology and the other on design, ECLISSE adopted an approach for developing solutions that could fit a range of different styles.

Departing from the original, rather traditional solutions with profiles designed to support jambs and architraves, flush sliding pocket door systems and hinged door frames were introduced which dispense with the need for exterior mouldings.

ECLISSE reinvented the concept of the frame, expanding it beyond the wall and rethinking its shape, exploring new surfaces and finishing materials, transforming a structural component into a true design element.

**Traditional, modern, contemporary.
The choice is yours.**

THE VALUE OF THE UNSEEN

SMALL DETAILS REVEAL MAJOR INNOVATIONS

ECLISSE company

ECLISSE S.r.l. designs and manufactures sliding pocket door systems, frames for hinged door, accessories and electric automations for doors in accordance with the UNI EN ISO 9001. For this reason, the company created a Research and Development team, which promotes voluntary testing under the observation of Italian CSI laboratory. ECLISSE operates in compliance with the UNI EN ISO 14001, which defines the development of an effective Environmental Management System. This certification ensures the company's commitment to preventing pollution and ensuring environmental compatibility of its sliding systems and frames. ECLISSE also chose to voluntarily adopt a Safety Management System and Occupational Health in conformity with the norm OHSAS 18001. OHSAS certification identifies an internationally recognized standard that aim at the protection of the health and safety of company employees and all those who are exposed to the company's activities.

Durability test for runners (UNI EN 1527)

Tests carried out in accordance with the European Standard UNI EN 1527 on 100 and 150 kg payload runners. After 100,000 opening and closing cycles (equal to 30 years of use) the runners showed no significant traces of wear or damages whatsoever and still worked.

Fully extractable track

It is made from the more robust aluminium alloy 6060 (UNI 9006:1) and protected by a 10 µm anodic layer with a T5 thermic treatment.

Strong shock resistance (UNI EN 1629)

An ECLISSE sliding door system was left completely undamaged after passing the European recognised shock test: a 30 kg bag crashed into it from different heights in accordance with the UNI EN 1629:2000 requirements.

Capacity load test for ECLISSE EWOLUTO®

The sliding pocket door system ECLISSE EWOLUTO® has been tested in order to assess its static load bearing capacity. Using a traditional mechanical two-points wall anchorage a capacity of up to 180 kg (close to the wall) is guaranteed, while a chemical anchorage can reach a capacity of 360 kg against the wall and 60 kg at a distance 600 mm from the wall. The maximum capacity of a handle bar, fixed with a four-points chemical anchorage, is 100 kg at a distance of 600 mm from the wall.

Anti-corrosion resistance (UNI EN 1670)

An ECLISSE sliding pocket door system with a three-layer protection (galvanization, primer coating and epoxy paint coating) showed no sign of rusting after 240 hours of salt spray test in a 95% humidity environment with a 5% NaCl solution (C.S.I. test).

ECLISSE began manufacturing sliding pocket door systems in 1989 in its factory near Treviso, Italy, and became an immediate success.

This rapid success was based on highly innovative product design and advanced production techniques. Better products and design quickly led to expansion throughout Europe where ECLISSE has become the largest producer of these systems. Its aim is to develop a construction technology characterized by innovation and excellence of quality standards. With more than 40 patents

so far, ECLISSE frames revolutionised the way we think about sliding door systems.

Doors slide effortlessly inside the wall, opening up the room and changing your perception of space.

ECLISSE is a leading company in its sector in Italy and worldwide, marketing its products all over Europe and in the main non-European countries through a commercial network born in 1995 with the opening of the first sister company in Quimper, France.

Further subsidiaries were later established in Poland, Austria, Czech Republic, Slovakia, Spain, Brazil, Germany, Romania and UK. In all the other countries ECLISSE is present with distributors and/or agents.

MOVING TOWARDS PERFECTION

● 1989

De Faveri Luigi establishes ECLISSE srl in Falzé di Piave, Treviso. First models to be produced are ECLISSE SINGLE, ECLISSE DOUBLE, ECLISSE NOVANTA, ECLISSE TELESCOPIC and ECLISSE UNILATERAL.

● 1991

In 1991, the first patent is obtained: weld-free attaching system that fastens the mesh to the counterframe (plaster version). The absence of welds prevents the formation of rust and possible mesh detachments.

● 1992

The extractable track is patented. In the same year, ECLISSE launches its stud wall kit with aluminium profiles and screws.

● 1996

In 1996 the company moves to Pieve di Soligo, Treviso, in a newly built dedicated structure. In the same year, ECLISSE inaugurates the first sister company under the name of ECLISSE France sas, in Quimper.

● 2000

ECLISSE patents the under frame tear-off profile, to correct possible differences in height between the finished floor level and the bottom of the installed counterframe can be adjusted. The expansion and consolidation in international markets leads ECLISSE to Poland. ECLISSE Polska Sp. z o.o is opened in Tczew. Also, the first website is launched.

● 2001

The distribution network expands in the Austrian territory: ECLISSE GmbH is established in Vienna.

● 2002

ECLISSE revolutionises the concept of the counterframe and patents ECLISSE LUCE, the first system designed to allow the insertion of electrical wiring. The growth of the group brings the company to the opening of ECLISSE ČR, s.r.o. in Prague.

● 2003

In 2003, the ECLISSE CIRCULAR model is introduced: the first counterframe for curved sliding pocket doors on the market.

● 2005

The alignment bar keeps the counterframe perfectly aligned during installation. It provides a solid joint between the frame and the metal stop jamb, guaranteeing a perfect squared positioning.

● 2006

ECLISSE consolidates its presence in Spain and sets up ECLISSE Iberia SL. The first version of sliding pocket door system without jambs and architraves is marketed: it is called ECLISSE SYNTESIS® LINE. ECLISSE Slovakia, s.r.o. is established in Banská Bystrica.

● 2007

In 2007, ECLISSE Brasil (Vila Velia) is the first ECLISSE subsidiary overseas.

● 2008

The expansion continues in Germany with ECLISSE Deutschland GmbH.

● 2009

ECLISSE Est srl in Bucharest officially becomes the Romanian subsidiary.

● 2010

New patent: ECLISSE EWOLUTO®, the counterframe that allows to hang wall cabinets, shelves and furniture. The ECLISSE showroom in Milan is the first exhibition space devoted entirely to the sliding systems.

● 2012

ECLISSE SYNTESIS® LUCE is the pocket door without jambs and architraves prepared for the insertion of electrical wiring. In Prague, a new ECLISSE showroom of over 100 sqm is inaugurated.

● 2013

ECLISSE SYNTESIS® COLLECTION is the complete modular system for flush walls that now includes both sliding pocket door systems and flush hinged doors.

● 2014

ECLISSE SHODŌ COLLECTION is the first integrated system for sliding pocket doors and flush hinged doors where jambs, architraves and baseboards are installed flush to the wall, with no interruption.

ECLISSE opens its showroom in Perugia, Italy.

● 2015

ECLISSE SYNTESIS® TECH is the solution that completes ECLISSE SYNTESIS® COLLECTION and that allows to contain service rooms. Wiring, plumbing, electrical systems and even closets can now be hidden discreetly inside the wall.

● 2016

ECLISSE BIAS® DS is the new bi-directional soft-close damper, completely hidden inside the track, that gently accompanies the door both in the closing as well as during the opening phase.

● 2017

ECLISSE opens its showrooms in Pescara, Italy, and in Munich. Not simple showrooms but reference points for architects, interior designers and private customers, who are becoming more and more attentive and curious. Places open to training sessions and to the development of synergies with all the players.

● 2018

ECLISSE SYNTESIS® BATTENTE GLASS and ECLISSE ACOUSTIC are launched. Technology in the service of design and living comfort.

● 2019

ECLISSE 40 is born! The door frame is shown for the first time: it emerges from the wall leaving a mark, becoming a discreet and yet strong presence. Inclined at 40 degrees, the frame is no longer just a functional structure, but a decorative element itself. ECLISSE UK Ltd officially becomes the 10th subsidiary.

● 2019

ECLISSE's 30th Anniversary.
ECLISSE celebrates its 30 years on January 10th.

● 2020

Always by the side of the installer. Resin-coated profiles and pre-drilled horizontal bars are two clever innovations which reduce installation times for pocket door systems, with no compromises on the final result.

ECLISSE **CLASSIC COLLECTION**

WITH JAMBS AND ARCHITRAVES

1

PERFECT COHESION

The only one with the protruding knurled plaster mesh: connecting the wall and the frame, it offers an increased grasp and avoids cracks, for an imperceptible joint between the sliding pocket system and the wall.

2

PERFECT ALIGNMENT

The exclusive patented alignment bar provides a solid joint between the frame and the metal stop jamb during the installation, ensuring a perfect alignment and the smooth sliding of the door.

3

A TEAR-OFF PROFILE THAT MAKES LIFE EASIER

Installation mistakes might happen: the patented under frame tear-off profile is the smart system to fix the difference between the bottom of the pocket and the finished floor.

4

SPECIFIC DESIGN FOR MASONRY CONSTRUCTIONS

41 kg of sturdiness and technology to integrate with the wall, seamlessly.

5

SLIDING RUNNERS WITH BALL BEARINGS

They ensure durability, smooth movements and a silent sliding. Suitable for door panels up to 100 kg and up to 150 kg on request.

6

ALWAYS CENTERED

With the self-centering guide the door always slides straight, avoiding any contact with the sides of the pocket.

7

EXTRACTABLE TRACK

The serenity of knowing that you can extract the patented track at any time, to clean the door sliding guide, replace it with a new track or install accessories.

8

SPECIFIC DESIGN FOR PLASTERBOARD CONSTRUCTIONS

The new reinforced horizontal bars come with a grid array of drillholes so that screws can be fastened to the metal sheet even more easily and faster than before.

ECLISSE SINGLE - DOUBLE

TECHNICAL DETAILS - STUD WALL

INNOVATIONS FOR THE INSTALLER

Pre-drilled horizontal bars

Quicker application of the plasterboards. In the ongoing effort to ease the construction work for the installer, ECLISSE introduced a perforated weave obtained by pre-drilling the horizontal reinforced bars. The new micro drillholes allows the screw to enter more easily into the metal sheet, speeding up the installer's work in the application of the plasterboard.

Furthermore, the optimization of the dove-tail profile and the increased width of the bar also improve its performance in terms of solidity of the structure.

Metal door post

It reinforces the structure preventing structural deformation.

Extractable track system (Patented)

The ECLISSE system has a patented extractable track which allows you to remove the track at any time with no need of masonry work.

PACKAGING

170 x 2330 x 115 mm for the kit version.

Starting from 640 x 2260 x 110 mm for the assembled version.

KIT

ASSEMBLED

VERSATILITY

The kit is extremely compact to store, taking up no more than 1 sqm for 50 units!

One kit can fit a finished wall thickness of 100 mm and 125 mm without any further parts.

Two adjustable door stops

When you close a pocket door, you don't want the door to start sliding back in the opening position, revealing an annoying chink of light. To avoid this the ECLISSE system has specially designed small clamps that hold the door in the closing position.

**Maintenance free track and runners**

Smooth and quiet sealed for life runners with chrome steel ball bearings run in an enclosed track so they cannot derail. Suitable for door panels up to 100 kg and up to 150 kg on request.

**Metal track holder**

Horizontal bar made of metal, rather than wood, increases the robustness of the structure against above loads.

**Marked pre-drilled horizontal bars**

The horizontal reinforced bars, made in 7/10 pre-drilled galvanized steel, grant high resistance to lateral pressure. The mark on the pocket's verticals allows you to easily draw a line to identify the center of the horizontal bar.

**Vertical reinforced bars**

ECLISSE pocket central verticals are made of 1.2 mm galvanized steel, formed into strong profiles. These are the strongest of their type on the market.

**Self-centering door guide**

Quick and easy to fit to the pocket door with no holes to drill, this guide cleverly guarantees a perfectly centered position.

ECLISSE SINGLE - DOUBLE

TECHNICAL DETAILS - **SOLID WALL**

Metal door post

It reinforces the structure preventing structural deformation.

Reinforced central verticals

ECLISSE pocket central verticals are made from 1.2 mm galvanised steel, formed into strong profiles. The strongest of their type on the market.

Extractable track system (Patented)

The ECLISSE system has a patented extractable track which allows you to remove the track at any time with no need of masonry work.

EASY TO PLASTER

Cement plastering does not fall because it is hold by the knurled thick mesh* (25 x 50 mm) placed in between the plate and the edge of the cement plastering.

*Knurl mesh: made of furrowed and engraved wire to improve cement plastering adhesion.

Alignment bar (Patented)

It provides a solid joint between the frame and the metal stop jamb during the installation. It guarantees a perfect square positioning.

Self-centering door guide

Quick and easy to fit to the pocket door with no holes to drill, this guide cleverly guarantees a perfectly centered position.

Under frame tear-off profile (Patented)

It allows to correct the difference in height between the finished floor level and the bottom of the installed counterframe. As easy as opening a can!

Two adjustable door stops

When you close a pocket door, you don't want the door to start sliding back in the opening position, revealing an annoying chink of light.

To avoid this the ECLISSE system has specially designed small clamps that hold the door in the closing position.

**Maintenance free track and runners**

Smooth and quiet sealed for life runners with chrome steel ball bearings run in an enclosed track so they cannot derail. Suitable for door panels up to 100 kg and up to 150 kg on request.

**Protruding plaster mesh (50x25 mm)**

It joins the pocket with the wall becoming an integral part of it, it protrudes from the frame by a few centimetres simplifying the installation and the adhesion of the cement plaster and offering a seamless and resistant finish.

**Horizontal reinforced bars**

The horizontal bars lend great resistance and rigidity to the pocket door system, so that it can effectively counter the tension generated by brickwork and solid wall. Robustness is fundamental as the frame replaces a portion of the wall.

**Micro-ribbed filler plate**

A 0.7 mm micro-ribbed filler plate is embossed to increase rigidity and strength. The embossing is a process of punching the metal sheet in order to create reliefs.

**Mesh-frame weld-free fixing system (Patented)**

It avoids the formation of rust and prevent the possible detachment of the mesh from the counterframe.

ECLISSE SIZE GUIDE

CHOOSING THE RIGHT POCKET DOOR

Sizing a single pocket door system is very easy.

Step 1 - Measure the available space.

Step 2 - Choose the standard pocket door frame size that will fit the space.

Step 3 - Perhaps you need a wider passage width? Then you might consider a couple of alternative options.

Using a Classic single pocket door systems as an example.

STEP 1

Measure the overall wall space you have available.
The pocket door frame needs to fit within this space.

STEP 2

YES

Look at the sizing table and decide which frame size will fit within the available space and which size door you can use with that frame.

E.g.: Consider an ECLISSE SINGLE sliding pocket door system.

Overall wall space length and height of partition = 1800x2300 mm.

Door panel size = perhaps you would like to use the largest possible standard door panel size to provide the largest passage width possible.

From the ECLISSE SINGLE size chart you can see that the widest frame size fitting the available space is 1697x2190 mm. This will provide a max. passage size of 800x2100 mm and will require you to buy a door 815÷835x2110 mm.

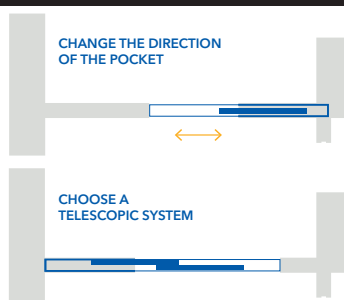

STEP 3

NO

If you want a larger passage width or door size than the frame size is providing...

ALTERNATIVE SOLUTION

...you might for example consider on which side to have the pocket

It may be that switching the position of the pocket with respect to door passage gives you a better solution.

If you require a larger passage width, a single telescopic system could give you a possible solution.

Just browse our complete product range to find the perfect solution for your needs!

ECLISSE SIZE GUIDE

STUDWORK, BRICKS AND FINISHED WALL THICKNESS

EUROPEAN WOOD/METAL STUDWORK FOR STUD WALL

Stud walls are made from wooden or steel studwork with plasterboard attached. This is important information to be considered while looking at the product size charts, as there are many sizes of studwork around the world. The steel framework replace a portion of the studwork and the doors are hung from the top track. ECLISSE pockets can be used with steel or wooden studwork. In the photo you can see what it looks like before applying the plasterboard.

	STUDWORK= S	INTERNAL PASSAGE= IP
	70*	54*
	75	54
	95*	79*
	100	79

Dimensions are given in mm.

Adding the plasterboard to the studwork you will reach the required finished wall thickness dimension.

Here an example (considering the plasterboard is nearly always 12.5 mm thick):

- 75 mm stud work plus 12.5 mm plasterboard on each side gives a finished wall thickness of 100 mm.
- 100 mm stud work plus 12.5 mm plasterboard on each side gives a finished wall thickness of 125 mm.

*Dimensions and sizes different from the following chart.

EUROPEAN BRICK THICKNESS FOR SOLID WALL

	BRICKS= Br	INTERNAL PASSAGE= IP
	60	54
	80	72
	100	89
	120	114

Dimensions are given in mm.

Dimensions are given in mm.

NON STANDARD SIZES

- ▶ Passage width from 600 to 1200 mm.
- ▶ Passage height from 500 to 2600 mm.
- ▶ Possibility of measures up to 2000 mm (width) and 3000 mm (height) with sizes and internal passages different from the chart.
- ▶ Frames with overall dimensions, passage sizes and internal dims different from the ones indicated on the table, can be realized on request.
- ▶ Non standard sizes have screwed horizontal bars.

NOTES

- ▶ When using pocket with internal dims of 54 mm max. door thickness 40 mm (including any glass holder for glazed door).
- ▶ Max door weight 100 kg (150 kg on request).
- ▶ ECLISSE counterframes can host any sliding door panel of standard dimensions available on the market.
- ▶ Install at finished floor level.
- * Listed measures refers to wooden door panels only.

ACCESSORIES

ECLISSE LUCE

TECHNICAL DETAILS

No limitations for light fittings, switches and electrical wires thanks to the patented ECLISSE LUCE system: the first pocket door system which allows you to install light spots, thermostats, switches and telephone wiring in the same wall section where it is hosted.

With this system you will be able to make full usage of the wall, opening up a whole host of options for interior lighting plans and other functional or aesthetic design ideas.

Available for single or double door.

Patented technology

ECLISSE LUCE patented technology that grants the box-frame to be arranged with any electric device.

Pre-cut steel

In the solid wall version the micro-ribbed steel filler plate is pre-cut, easy to remove in order to insert electrical boxes.

It is possible to insert up to 10 electrical boxes per pocket (5 on each sides).

Electrical boxes

Electrical boxes supplied by ECLISSE have a specific depth of 40 mm.

2 electrical boxes per pocket are provided as standard for ECLISSE LUCE SINGLE and ECLISSE LUCE DOUBLE.

ECLISSE EWOLUTO®

TECHNICAL DETAILS

A box-frame that reproduces the wall perfectly.
ECLISSE EWOLUTO® (patented) is the only system that allows to use the wall accomodating the pocket door to install cabinets, wardrobes and other heavy furniture in complete safety.
Available for single or double door, only for solid wall version.

When you have little space also a sliding pocket door, despite being a space-saving solutions itself, can be a limiting factor if it's impossible to use the wall where its frame is inserted...

...but ECLISSE EWOLUTO® system allows to hang wall cupboards, shelves, consoles and shower boxes directly on the portion of wall within which the door slides.

ECLISSE EWOLUTO®
SOLID WALL

PASSAGE SIZE
L=600÷1200 mm
H=1000÷2400 mm

ECLISSE tested its EWOLUTO® system with the CSI testing laboratory in order to assess the load capacity of the system's vertical surfaces.

We volunteered these tests to be sure to offer a product with surfaces where you can hang loads in complete safety.

A shelf capacity (two-points anchorage) varies according to the type of anchor system and to the distance between the wall and the hanging extremity. Using traditional mechanical wall anchors a capacity of 30 kg (at 600 mm from the wall) to 180 kg (against the wall) is guaranteed. A chemical wall anchorage has a better capacity: from 60 kg (at 600 mm from the wall) to 360 kg (against the wall).

The maximum capacity of a handle bar, fixed with a four-points chemical anchorage, is of 100 kg at a distance of 600 mm from the wall.

TWO POINTS ANCHORAGE

FOUR POINTS ANCHORAGE

Values in figures are approximate.

The technical staff can modify capacity values in response to the needs and type of installation. ECLISSE only gives useful advices about anchoring. For special or particular applications, different from the ones described above, please contact the technical staff.

ECLISSE TELESCOPIC

TECHNICAL DETAILS

Two parallel door panels sliding into the same pocket, a wide passage width and a minimum encumbrance. An extraordinary solution that offers a passage width twice the footprint of the counterframe. Up to 4 telescopic parallel sliding door panels can cover a passage size width up to 4700 mm. Contemporary design conceives more and more open spaces.

ECLISSE CIRCULAR

TECHNICAL DETAILS

Curved door panels? Why not?

Conceived to offer new solutions to the most diverse needs in interior design, the ECLISSE Circular system was designed to hide a sliding door into a curved wall, to free creativity and to reinterpret the traditional division of domestic spaces.

Available for single curved panel or two facing curved panels.

**Curved rail**

Special double-wheeled runners are designed expressly to slide in curved rails, no matter the radius.

**Curved structure**

ECLISSE CIRCULAR model structure is made of modular metal sheet, in order to grant a perfect internal sliding passage.

ECLISSE UNILATERAL

TECHNICAL DETAILS

Two opposite doors into one pocket.

ECLISSE UNILATERAL pocket door system allows two opposite doors to slide in opposite directions but disappearing into the same pocket.

The footprint of a single pocket to give acces to two separate, distinct rooms: all the benefits of two sliding doors when there is no room for two counterframes.

It is ideal when you need two parallel doors and have a short wall space like in corridors and hall entrances.

ECLISSE **NOVANTA**

TECHNICAL DETAILS

It is often the case that a full hinged door restricts the furnishing options when space is limited.

Sometimes however, there is not even enough space to install a counterframe for a pocket door.

With ECLISSE NOVANTA half of the door slides into the wall while the other half is hinged and swings in.

ECLISSE HOIST

SOLUTIONS FOR DISABLED ACCESSSES

ECLISSE HOIST is a variation of the standard models ECLISSE SINGLE, ECLISSE LUCE SINGLE and ECLISSE EWOLUTO® SINGLE.

It represents a solution that eliminates architectural barriers so any interior space can benefit from the advantages of a sliding pocket door system. The special conformation of the track does not interfere with the rail of the motorized lifting device, allowing at the same time the unhindered passage from room to room and the closing of the door.

ECLISSE HOIST can be installed on models starting with a minimum passage width of 900 mm (considering that the door panel protrudes by 100 mm to allow the installation of the push handle, the net passage width is 800 mm). Door panel maximum weight is 60 kg.

ECLISSE HOIST is custom designed on a project.

Sliding pocket door systems offer more space and greater manoeuvrability.

Of course more usable space and no intrusion into corridors are advantages everyone can appreciate and value, but if you are a wheelchair user or have difficulty in mobility it is clearly much, much easier to pass through a sliding pocket door.

The uncomfortable backward and forward motion needed when using a hinged door is completely eliminated.

This is also the case for anyone using walking aids, blind or visually impaired people, as the danger of the leading edge is removed.

HINGED DOOR

1. Get closer to the door, lean toward it to hold the door handle.
2. With one hand open the door, with the other push the wheelchair backward.
3. To allow the wheelchair passage the hinged door has to be completely open.
4. Rotate the wheelchair by 180° and proceed backward through the door thrusting with a hand, while holding the handle with the other one to close the door.
5. Rotate by 180° and go on.

SLIDING POCKET DOOR

1. Get closer to the sliding door and open it.
2. Go through the door and close it.
3. Go on.

ECLISSE **TWICE**

TECHNICAL DETAILS

ECLISSE TWICE allows you to transform a sliding pocket door into a large hinged opening, by simply pulling a lever. A solution that makes it possible to temporarily double the passage size, extremely useful in hospitals or industrial premises, to facilitate the passage of beds or large equipment.

ECLISSE TWICE is made of one anodized aluminium structure and two wooden lateral panels.

The profile is available in aluminium finish or painted in RAL colours.

The panels are made of white primer-coated melamine faced eco-friendly chipboard, ready to be painted.

For cleaning and maintenance, take off the side panels by simply removing the screw located under the pin handle.

ACOUSTIC

ACOUSTIC KIT

SILENCE HAS MORE SPACE

Door, jambs and gaskets for sound insulation.
ECLISSE ACOUSTIC is an integrated system with high soundproof performances designed specifically to reduce the noise between rooms.
All the advantages of a sliding pocket door system associated with the acoustic comfort.

Open door

1

Closed door

Upper weatherstrip

Inserted into the upper milling of the door panel, it opens when the door closes.
The high quality materials allows to preserve over time the original acoustic performance.

Open door

2

Closed door

Lower weatherstrip

Inserted in the lower milling of the door panel, it rises and falls at every opening and closing of the door.
The rounded and flexible shape wraps the draughts accurately while the high quality materials allows to preserve over time the original acoustic performance.

REFERENCE NORMS

Noise abatement 38 dB (-1; -3)

Test performed on a 890x2030 mm frame, installed to perfection, equipped with blind shell lock.

Reference norms

UNI EN ISO 10140 - 2 Laboratory measurement of sound insulation in buildings and building elements - Part 2: Measurement of acoustic insulation by air.
UNI EN ISO 717 - 1 Evaluation of sound insulation in buildings and building elements - Part 1: Sound insulation by air.

**5 Door panel**

The special stratigraphy of the door guarantees a high soundproofing performance. The acoustic sliding panel is 40 mm thick and is supplied as standard already set for the installation of accessories. The door is available in raw walnut Tanganyika and in lacquered RAL colours.

6 Jambs and Architraves

The acoustic jambs are already milled and ready for the installation of the acoustic gaskets.

Open door — **3** — Closed door

**Magnets**

Magnets are positioned on the door panel thickness and, at the same height, on the stop jamb upon which it closes. They keep the door perfectly closed, maintaining the total adhesion between the two surfaces.

Open door — **4** — Closed door

**Acoustic gaskets and bumps**

Installed on the door and the jambs, they seal the vertical interstices, closing all the draughts between the door and the jambs on the side of the pocket. They are available in black and white colours.

AVAILABLE TYPES DIMENSIONS AND ACCESSORIES**Compatible sliding pocket door systems**

ECLISSE ACOUSTIC can be installed on both solid and stud wall versions of ECLISSE SINGLE models with finished wall thickness of 125 and 150 mm, ECLISSE LUCE SINGLE and ECLISSE EWOLUTO® SINGLE, also if already mounted. Compatible widths goes from 600 to 1000 mm, compatible heights from 2000 to 2400 mm.

ECLISSE SYNTESIS® FLUSH COLLECTION

WITHOUT JAMBS AND ARCHITRAVES

1

FLUSH POCKET DOOR

The new resin-coated profile needs a much thinner layer of drywall plaster along the perimeter of the doorway, reducing the drying time and therefore the installation time.

2

PATENTED SYSTEM WITH LIGHT SPOTS

The exclusive ECLISSE Luce system allows to install up to 10 electrical boxes (5 on each side) directly on the pocket. The wall that hosts the counterframe thus becomes available for illumination and especially switches, which are always at hand.

A pocket door system without jambs and architraves, a concealed hinged door frame, hidden compartments and a flush baseboard adapter

3

FLUSH HINGED SYSTEMS

ECLISSE flush systems are ready to be painted in the same colour as the wall or covered with wallpaper. The tensioning rod comes as standard within the door panel to maintain over time the perfect coplanarity with the wall.

4

FLUSH BASEBOARD

ECLISSE special profile is the solution to install a baseboard flush to the wall: the wall surface is totally flat and furniture leans to the wall. It also allows to backlit your baseboard with LED stripes!

5

HIDDEN COMPARTMENTS

Flush-to-wall panels which hide wardrobes, shelving, service compartments, but also technical trap doors concealing electrical and plumbing systems. With push-pull openings, handles or key locks.

ECLISSE SYNTESIS® LINE

TECHNICAL DETAILS

**Resin-coated integrated-structure profiles**

Vertical reinforced bars, top beam and the metal door stop are pre-treated with a special resin which aids the adhesion of the final finishing layer.

**Sealing strips**

The ECLISSE SYNTESIS® FLUSH pocket door systems have paintable sealing strips that close off the space between the door and the track, hiding it from view, and also allow for tolerance on little differences in height.

**Rear bracket and self-centering door guide system (Patented)**

Inserting the door panel is way easier thanks to the combination of the rear bracket (pic. A) and the self-centering door guide, which is to be screwed on the frame and does not require drilling the floor (pic. B).

**Reinforced joint**

It guarantees linearity and a better linkage of track, frame and verticals.

**Vertical reinforced bars**

They improve the strength of the pocket door.

**Reinforced edge profiles**

Pocket, track holder and doorpost have an innovative edge design that allows for a crisp plaster finish right to the edge, for a minimalist architrave free appearance.

The frame is reinforced at key points to avoid strains that can cause cracks in the plaster.

ECLISSE SYNTESIS® LUCE

TECHNICAL DETAILS

ECLISSE SYNTESIS® LUCE brings new performances, combining aesthetic with handiness: the neatness of design makes it perfect for any architectural need, and the pocket frame can be fitted with wiring conduits, such as light points, switches and sockets.

Resin-coated integrated-structure profiles

Special constructive details such as the resin-coated integrated-structure profiles (vertical reinforced bars, top beam and metal door stop) allow the wall to look extremely homogeneous while completely concealing the door.

Patented technology

ECLISSE LUCE patented technology fits out with dimmer controls, switches and sockets into the wall hosting the counterframe: it's perfect to keep light points at hand, right next to the door passage.

NOTES

- ▶ Passage width from 600+600 to 1300+1300 mm.
- ▶ Passage height from 1000 to 2700 mm.
- ▶ Half sizes need bespoke door panels (e.g. A=1300 mm).
- ▶ The passage A is reduced by 14 mm.
- ▶ Only standard positions for the electrical boxes are possible.
- ▶ Positions for the electrical boxes are supplied as standard on both sides of one pocket.
- ▶ Provided with 4 electrical boxes.
- ▶ Max door thickness 40 mm (including any glass holder for glazed door).
- ▶ Max. door weight 100 kg (150 kg on request).
- ▶ Install at finished floor level.
- * Listed measures refer to wooden door panels only.
- ▶ Due to system's productive characteristics and for safety reasons, ECLISSE recommends the door panel protrudes 80 mm.
- ▶ If needed, the adjustable door stop allows to modify the real passage size.
- ▶ In order to ensure that the door disappear completely, a milling is required.
- ▶ The milling for the door guide must have the following dimensions: 7 x 15 mm.

ACCESSORIES

- ▶ ECLISSE SYNTESIS® BASEBOARD
- ▶ Double doors co-ordination for ECLISSE SYNTESIS®

ECLISSE SYNTESIS® LINE BATTENTE

TECHNICAL DETAILS - THE FRAME

Long lasting and paintable

The aluminium frame is firstly subjected to an anodization treatment against oxidation and then primer-coated to facilitate paint adhesion.

6 adjustable clamps

The clamps are adjustable in height and prepared to be easily fixed to brick walls.

100 height mark

To help the installer find the correct floor height.

ECLISSE badge

The frame is recognisable by the ECLISSE trademark.

- Spacer panel in OSB 3 (25 mm thickness) provided as standard to guarantee a perfect squaring and installation of the frame.
- Provided with plastic covering to prevent scratches and damages during handling and installation phases.
- Bar code for product identification.
- Stable, easy to install and soft gaskets. They are to be applied on the frame and not on the door panel.
- Hinges covering protections from plaster (on pull version).

TECHNICAL DETAILS - THE DOOR

Door

Hollow core with double solid wood frame to increase rigidity while reducing weight.

Tensioning rod

Special adjustable device, it helps keep the door panel in constant tension, improving the door flatness and guaranteeing coplanarity with the wall.

Hinges

3 adjustable hinges (in height, width and depth) for a perfect calibration of the slightest perimeter spacing.

Note: for door weighing more than 50 kg (max 65 kg) 4 hinges are needed.

The magnetic lock

Modern design and minimal lines: it stays flush to the plate and guarantees an extraordinary softness while closing.

Eccentric strike plate:

- Minimal design, it also remains flush to the frame.
- Eccentric: it allows fixing little installation imperfections, always ensuring a perfect locking.

Note: it comes as standard without lock or with key lock.

- The door is recognisable by the ECLISSE badge.
- Primer-coated, to increase and improve the cohesion of mural painting or lacquering (matt or glossy).
- 45 mm thickness.
- Double wooden perimeter structure to improve strength.
- Edge banding along the entire perimeter.
- Tensioning rod (as standard starting from H= 2000).
- Standard door panel setted for handle only; key or thumb turn lock settings are available upon request.

ECLISSE SYNTESIS® LINE BATTENTE

with ELECTRIC STRIKE - PRIMER-COATED ANODISED ALUMINIUM FRAME

The electric strike for hinged door is an access control device for opening doors via an electric impulse that releases the lock.

The device requires the installation of a cylinder lock so that the door can be opened in the event of a power outage.

The activation mechanism (magnetic card, pushbutton, etc.) is not included.

PUSH DOOR

PULL DOOR

NOTES

- ▶ Available with or without header (same price)
- ▶ Maximum weight of door panel with 3 hinges: 50 kg
- ▶ Available with 4 hinges: Maximum weight of door panel 65 kg
- ▶ Combination with handle and knob set recommended.
- ▶ Activation mechanism (magnetic card, button, etc.) not included

ECLISSE SYNTESIS® LINE BATTENTE

INCLINED

ECLISSE SYNTESIS® LINE BATTENTE can also be produced with a sloping header.

The ideal solution for sloping ceilings, attics or understair spaces

PULL DOOR

The frame is available only for pull version for solid and stud walls.

ECLISSE SYNTESIS® LINE BATTENTE INCLINED can be realized with different angles (α), both with or without header.

NOTES

- ▶ Angle α from 60° to 89°
- ▶ Hinges are always on the higher side
- ▶ **H1** = overall height of the frame
- ▶ Available with or without header (same price)
- ▶ Maximum weight of door panel with 3 hinges: 50 kg
- ▶ Available with 4 hinges: Maximum weight of door panel 65 kg

FLUSH WALL CLOSURE

ECLISSE SYNTESIS® AREO - DIMENSIONS

A flush frame which conforms with the surrounding space.

ECLISSE SYNTESIS® AREO offers the perfect way to disguise built-in cupboards and closets elegantly and discreetly, combining function with form.

The frame can be retracted seamlessly into the wall without protruding. It can be modified to match the surrounding space and either painted or covered with appropriate wallpaper. With its clear lines, ECLISSE SYNTESIS® AREO also meets the latest requirements of style, containing built-in cupboards or discreetly concealing areas and spaces which are preferably not visible.

ECLISSE SYNTESIS® AREO can be customised in terms of the opening and dimensions satisfying any technical and functional requirements without sacrificing appearance.

FLUSH WALL CLOSURE

ECLISSE SYNTESIS® TECH - DIMENSIONS

ECLISSE SYNTESIS® TECH is the solution that completes ECLISSE SYNTESIS® COLLECTION's range. It allows to contain technical rooms. Electrical wiring, plumbing, and even closets can now be concealed and discreetly integrated into the wall.

Thanks to ECLISSE SYNTESIS® TECH, the wall looks completely unchanged while the technical spaces remain accessible, to be open only when needed through comfortable push-pull openings.

On demand are also available handles with lever or with key.

Customizable with any type of opening, single or double leaf, folding or removable panel, it allows you to hide any item or equipment that we do not want to be visible, leaving it inspectable for any maintenance.

ECLISSE MIMESI

ANODISED ALUMINIUM PROFILES

FINISHED WALL THICKNESS
100-108-125-150 mm

The new ECLISSE Mimesi profiles made from anodised aluminium have been developed to allow sliding door models of the ECLISSE Syntesis® Collection and an adjacent ECLISSE 40 frame to communicate with each other and to create a harmonious, cohesive room space.

The profiles can be used with ECLISSE Syntesis® Line and ECLISSE Syntesis® Luce, making allowance for the characteristic close tolerances of a flush pocket door system, at the same time ensuring the integrity of the style throughout the house.

ECLISSE 40 COLLECTION

SYSTEMS FOR SPLAYED FRAMES

THE FRAME SEEN FROM
A NEW PERSPECTIVE.

Not settling for the status quo, not taking anything for granted and constantly challenging the world view creates the space to design from a new perspective.

Because just when you think you know something, you have to change your approach and look at it from a new angle.

1

1

ON ONE SIDE,

a door flush with the wall gives elegance and discretion.

2

ON THE OTHER SIDE,
geometric lines that go deep.
The frame empties the wall and
enhances the room.
Like a picture frame, it encloses the
door and invites us to cross through it.

ECLISSE 40 COLLECTION

SYSTEMS FOR SPLAYED FRAMES

A single frame, for both stud wall and solid wall.
Supplied with a plastic protection to prevent it from getting dirty or scratched on site.

Paintable and durable over time

The aluminium frame undergoes an anodising treatment against oxidation in order to obtain the different ECLISSE finishings.
The primer-coated version favours the adhesion of the paints.

NO cracks!

The frame profile is specifically designed to avoid the formation of cracks.

Very robust frame

The frame is made of anodised aluminium and weighs about 3.5 kg per linear meter (for Thk. 125 mm).

The door is recognisable by the presence of the ECLISSE logo. A universal shape to be adapted to the opening direction (right or left).

Tensioning rod

A special device adjustable at any time that keeps the door panel in constant tension, ensuring the perfect coplanarity between the door and the wall.

Magnetic lock

Modern design and minimal lines: it stays flush to the plate and guarantees an extraordinary softness while closing.

Eccentric strike plate:

- Minimal design, it also remains flush to the frame.
- Eccentric: it allows fixing little installation imperfections, always ensuring a perfect locking.

Note: it comes as standard without lock or with key lock.

3 Adjustable hinges

Adjustable on the 3 axes (height, width, depth) for a perfect calibration of the perimeter size.

Note: for door weighing more than 50 kg (max 65 kg) 4 hinges are needed.

LEFT PUSH DOOR - RIGHT DOOR FIXED

LEFT PULL DOOR - RIGHT DOOR FIXED

RIGHT PUSH DOOR - LEFT DOOR FIXED

RIGHT PULL DOOR - LEFT DOOR FIXED

ECLISSE 40 DOUBLE is available only with header.
The fixed door is kept closed with a latch (supplied with the door panel).

With header

ECLISSE 40 DOUBLE

APPLICATIONS

The frame fits both stud and solid wall.

For solid wall 6 clamps are cemented in the special spaces created in the wall.

For stud wall the frame is fixed with screws to the wood or metal structure through the existing holes.

LEFT DOOR FIXED

BASEBOARD

A passion for detail has been a distinctive feature of the work at ECLISSE since the beginning.

This is why our product range includes three different baseboards, which are able to harmonise with a wide range of furnishing styles.

ECLISSE Syntesis® Baseboard is a profile solution which is installed flush with the wall and is notable for his minimalism, designed to harmonise elegantly with the furnishings of the room.

DELTA is the innovative baseboard, easy to install and with a modern geometric design that appears to change depending on the viewing angle. There is nothing else like it on the market.

ECLISSE DELTA

TECHNICAL DETAILS

ECLISSE DELTA is the new aluminium baseboard which redefines the concept. Its appearance along the length of the wall is understated yet unmistakeable.

Like a good theatrical production, this baseboard presents a frontal illusion of a flush effect which emphasises the nature of the wall. But the true magic is revealed when the viewing angle is changed: The viewer is pleasantly surprised by the unexpected slant in ECLISSE DELTA, which divides up the space and imbues the environment with a unique expressive force.

The pattern of the three-dimensional terminal pieces is also very novel and lends them an unmistakeable, unique appearance.

Aesthetics

With its special viewing angle feature, ECLISSE DELTA divides the space up with well-defined, geometric lines. The baseboard is the perfect foil for a modern, avant-garde style, compatible with ECLISSE Syntesis® Collection, ECLISSE 40 Collection.

Technical features and finishes

ECLISSE DELTA is available in two different heights (50 and 70 mm) to satisfy different furnishing requirements. It is tapered from 13.5 mm to 1.6 mm, which is the same for both heights. ECLISSE DELTA is manufactured from aluminium in three variants: anodised aluminium, painted white and painted black. The special terminal pieces also highlight a precise finish close to the passage width of the doorway.

Application

Upon completion of the installation, ECLISSE DELTA can be fitted easily and without any special procedures simply using only silicone.

APPLICATIONS

2000 mm aluminium profiles for fastening to the wall.
Height 50 mm.

2000 mm aluminium profiles for fastening to the wall.
Height 70 mm.

ECLISSE SYNTESIS® BASEBOARD

TECHNICAL DETAILS

The ECLISSE SYNTESIS® BASEBOARD (skirting) is an innovative idea to decorate house spaces in an elegant, minimal and modern way.

Unlike the traditional baseboard, this profile allows to install a perfectly flush-to-the-wall skirting that runs along the wall without protruding.

This way, furniture can be placed adherent to the wall, without remodelling the baseboard or leaving annoying gaps between the furniture and the wall.

The principle is simple: it is simply necessary to create a hollow for the baseboard by placing the special aluminium profiles while creating the wall structure.

The ultimate expression of the ECLISSE SYNTESIS® FLUSH concept.

Aesthetics

To fix the profiles to a solid wall a structural sealing adhesive is needed; in the case of stud walls the profiles, specifically perforated, are to be fixed with screws.

Technical features and finishes

The aluminium profiles have a triple-chamber structure that assures robustness and allows a perfect union between two different bars thanks to the special joints.

Application

The profiles fit with the insertion of standard baseboards (maximum height: 58 mm); for higher baseboards, simply place the profiles higher than the finished floor level.

APPLICATIONS

The aluminium profile is supplied in 2000 mm long bars. Useful space in height for the baseboard: 58 mm

- Terminal profiles are needed for ECLISSE Syntesis® Collection, ECLISSE 40 and ECLISSE AREO
- Adhesive sealant for solid wall; one pack of adhesive for 25 linear metres

ECLISSE SYNTESIS® BASEBOARD

LED LIGHTING APPLICATION (LED not provided)

ECLISSE SYNTESIS® BASEBOARD can function as a step marker if backlit with LED.

- The baseboard (skirting) must be milled on the top of the rear side: 25 mm from the top, 4 mm in depth (see picture).
- Fix the LED stripe on the profile in the space left by milling.
- The baseboard height must be reduced by 2 mm to allow the light to pass through.

ECLISSE DOORS

ECLISSE offers a range of doors with different finishes, both for sliding and hinged versions, as well as various solutions for baseboards flush with the wall. The door range includes finishes in different materials, from primer-coated versions ready to be customized with paint or wallpaper, to trendy wood veneers and the most versatile lacquered or glass doors. From design to technical proposals, choose the most suitable for you.

DOOR PANELS - JAMBS

DOOR PANELS

ECLISSE offers a range of door panels for flat, sectional or curved doors. Besides helping to prolong service life, prevent loss of shape and protect against all other environmental stresses, the materials also lend the items elegance, sophistication and absolute precision.

JAMBS AND ARCHITRAVES

The door panels can be completed with ECLISSE jambs and architraves. These are available in tanganyika walnut wood, or laminated.

SLIDING - BATTENTE - **PRIMER-COATED - LACQUERED - WOOD VeneerS**

The primer-coated door panels, either sliding or hinged, are ready to be finished with wallpaper, varnish or paintings of the same colour as the wall.

ECLISSE SYNTESIS® COLLECTION solutions are perfect for hiding walk-in closets and utility rooms.

DOORS - ECLISSE SYNTESIS®

SLIDING - BATTENTE - PRIMER-COATED - LACQUERED - WOOD Veneers

The door panels for the ECLISSE SYNTESIS® COLLECTION models are available in the following finishes:

- primer-coated untreated door panels ready to be painted or lacquered
- lacquered door panels in different RAL colours
- door panels in wooden veneers such as natural oak, white ash, natural ash, open pore RAL 9010 white lacquered ash

Door panels, both sliding and hinged have a standard tensioning rod starting from H = 2000 mm.

HANDLES

ECLISSE offers a range of handles and lock kits for sliding pocket doors and for hinged doors, both for glass and wooden panels.

The ECLISSE lock kits are equipped as standard with integrated pull lever, to ease the gripping of the door and give a neater and more elegant appearance, without the finger pull hole above the plate. In double door models the absence of the protruding finger pull thickness allows the edges of the two sliding door panels to join perfectly, preventing any light from passing between the closed door panels.

The lock kits are available in different finishes, to match any type of door.

DOOR PULL LEVER

The new standard lock kit for all sliding door models, with ECLISSE branded plate and integrated pull lever, offers numerous advantages over the traditional finger pull:

- the comfort in gripping the door is much greater
- the door panel stop is neater and more elegant, without the hole of the finger pull above the plate
- in the double door models the absence of the protruding finger pull thickness allows the edges of the two sliding door panels to join perfectly, preventing any light from passing between the closed door panels

ACCESSORIES

FOR ECLISSE SLIDING DOORS

ECLISSE BIAS®

Built-In Anti-Slam.

Soft close with anti-slam technology for single and double doors.

This damper for sliding pocket doors, fully integrated inside the track and invisible from the outside, gently slows down and accompanies the door in the closing phase, with a smooth and quiet motion.

It's equipped with an oil piston.

It guarantees the closing of a door panel of up to 40 kg with a perfect scrolling. Still, it offers a good slowing down even for doors up to 100 kg.

Suitable for glass or wooden doors, it can be installed on every ECLISSE sliding door system, except for ECLISSE CIRCULAR and ECLISSE NOVANTA.

Available also in combination with the Multi-slide hardware set.

ECLISSE BIAS® DS

Built-In Anti-Slam Double Side.

Bi-directional soft close with anti-slam technology for single and double doors.

A bidirectional damper for sliding pocket doors, fully integrated inside the track and invisible from the outside, gently slows down and accompanies the door both in the opening and in the closing phase, with a smooth and quiet motion in both directions.

It guarantees the opening and closing of a door panel of up to 40 kg with a perfect scrolling. Still, it offers a good slowing down even for doors up to 100 kg.

Suitable for glass or wooden doors, it can be installed on every ECLISSE sliding door system, except for ECLISSE TELESCOPIC, ECLISSE CIRCULAR and ECLISSE NOVANTA. Available also in combination with the Multi-slide hardware set.

Only for door panels with passage widths wider than 700 mm for the ECLISSE SYNTESIS® COLLECTION and wider than 800 mm for the ECLISSE CLASSIC COLLECTION.

ACCESSORIES

FOR ECLISSE SLIDING DOORS

RALLENTY SOFT

The mechanical system that slows the door down for a gentle closure, enhancing the comfort and functionality of the sliding door.

Invisible from the outside, it is fixed to the door panel and can be retrofitted also with already installed counterframes.

It is available in three versions:

- with the SELF-CLOSING SYSTEM
- for door panels up to 40 kg
- for door panels over 40 kg and up to a maximum of 50 kg

When installed in combination with the DOUBLE DOOR CO-ORDINATION

- it slows down and gently closes door panels weighing up to 25+25 kg.
- it slows down the closing movement of door panels weighing more than 25+25 kg (max 50+50 kg).

Suitable for glass or wooden doors, it can be installed on models with jambs of the ECLISSE CLASSIC COLLECTION, except ECLISSE CIRCULAR and ECLISSE NOVANTA.

SELF-CLOSING SYSTEM

Thanks to the self-closing mechanism, once opened the door closes automatically. It is a mechanical system that can be installed also at a later time, on a pocket door system already mounted.

The mechanism is completely invisible from the outside and the door closing speed can be adjusted at any time without removing the door.

- ANTI-WARP PROFILE included.
- Max door weight 40 kg.

For a smooth closing of the door, combination with RALLENTY SOFT is recommended.

Suitable for wooden doors only, it can be installed on ECLISSE SINGLE, ECLISSE LUCE SINGLE and ECLISSE UNILATERAL.

Note: using a self-closing system the passage size is reduced by 10 mm.

ACCESSORIES

FOR ECLISSE SLIDING DOORS

DOUBLE DOOR CO-ORDINATION FOR CLASSIC

The synchronised movement of double sliding doors enables both door panels to be opened or closed together by moving only one panel.

This is supplied as standard with ECLISSE BIAS®.

Under optimum conditions, and with door panels weighing 25+25 kg, ECLISSE BIAS® slows the doors as they close and brings them together. With heavier doors (up to a maximum of 50+50 kg), the door is only slowed down by the closing mechanism.

This can also be retrofitted on a pocket door system which is already installed.

The function is exclusively available for wooden doors and usable for models ECLISSE DOUBLE, ECLISSE LUCE DOUBLE, ECLISSE EWOLUTO® DOUBLE with passage widths of 600+600 mm to 1000+1000 mm.

N.B.: For pocket door systems with passage widths of 600+600 mm, the door panels protrude from the jambs.

DOUBLE DOOR CO-ORDINATION FOR SYNTESIS®

Specifically designed for sliding pocket door systems without jambs, this accessory allows to open and close the two doors simultaneously by moving only one door at a time. The functionality is greatly increased, especially in the case of wide passage sizes.

Thanks to the ECLISSE patented extractable track, it can also be installed in an already mounted counterframe.

■ ECLISSE BIAS® included.

For door panels up to 25+25 kg it slows down and gently closes the doors.

For door panels over 25+25 kg and up to 50+50 kg it slows down the closing movement.

■ Suitable for double door systems with passage width from 600+600 to 1000+1000 mm.

Suitable for wooden doors only, it can be installed on ECLISSE SYNTESIS® LINE DOUBLE and ECLISSE SYNTESIS® LUCE DOUBLE.

Note: in case of passage size 600+600 mm, the door panels protrude from the jambs so the passage width is reduced.

ACCESSORIES

FOR ECLISSE SLIDING DOORS

TELESCOPIC SYNCHRONISATION

The synchronisation for telescopic sliding pocket door systems allows the simultaneous and harmonious movement of the two door panels which slide in the same direction, gently and without tearing: the first door panel drags the second one and the two panels slide together. It can be installed directly to the door panels with no need to replace the track.

- Compatible with ECLISSE BIAS®.
For door panels up to 25+25 kg it slows down and gently closes the doors.
For door panels over 25+25 kg and up to 50+50 kg it slows down the closing movement.
- ECLISSE TELESCOPIC DOUBLE requires 2 synchronisations and (optionally) 2 ECLISSE BIAS®.
- Max door weight 40 kg.

Suitable for wooden doors only, it can be applied on ECLISSE TELESCOPIC SINGLE and ECLISSE TELESCOPIC DOUBLE with coupled door panels from 600+600 to 1200+1200 mm.

Note: when fully opened, the door panels protrude slightly from the jambs so the passage width is reduced.

ANTI-WARP PROFILE

ECLISSE offers an extruded aluminium guide section, specifically designed and developed to be fitted into the bottom of sliding pocket doors. This profile is easy to fit even on an already installed pocket door, requiring no special processing apart from a milled recess along the lower edge of the door panel. The technical performances offered by the anti-warp profile are an improved sliding action, an increased wear resistance and protection against deformation due to humidity.

The aluminium guide has been designed to fit perfectly the dimensions of the door guide that comes as standard with all ECLISSE counterframes. To install it, simply adapt the milling to the profile size.

Detail of the door panel with standard door guide (milled only)

Detail of the door panel with anti-warp profile

ACCESSORIES

FOR ECLISSE SLIDING DOORS

E-MOTION

E-MOTION is the linear motorised unit for ECLISSE sliding pocket doors: the door opens and closes by itself. The magnetic technology applied makes it very silent and easy to install. The motor unit is pre-assembled with power supply and switch cables, ready to be installed.

Plug&Play

Just connect the motor to the power supply (AC 230V) and operate the switch.

Self-setting

Once the motorisation is installed, the innovative electronic control system starts a self-setting process which senses passage size, weight and friction of the door, in order to set the opening-closing door cycle (speed and acceleration).

Adjustable

Once the self-setting and self-testing process is completed, it is always possible to modify the door opening speed, the opening time, and the sensitivity to obstacles.

Fitted as standard for the following functions:

- **Push&Go:** through a light manual impulse on the door handle, the system starts an opening cycle automatically
- **Automatic:** an impulse from radar, switch or remote control opens the door completely; once opened, the door closes automatically
- **Open:** selecting this mode, the door remains open; this function allows the manual opening of the door as well
- **Manual:** in case of power failure, E-MOTION works in manual mode; the absence of mechanical elements still guarantees a slight and silent movement

Optional fittings:

- remote control with receiver card
- active infrared sensor with variable detection area
- electromechanical block with remote control

E-MOTION on single door models:

- ECLISSE SINGLE
ECLISSE LUCE SINGLE
ECLISSE UNILATERAL
ECLISSE EWOLUTO® SINGLE
- Passage sizes for single doors:
W = 700÷1300 mm
H = 1000÷2600 mm
- **Max door weight: 80 kg** (wooden or glass doors).
- Finished wall thickness starting from 100 mm.

E-MOTION on double door models (2 motor units):

- ECLISSE DOUBLE
ECLISSE LUCE DOUBLE
ECLISSE EWOLUTO® DOUBLE
- Passage sizes for double doors:
W = 600+600÷1300+1300 mm
H = 1000÷2600 mm
(for W<700+700 mm the electronic unit is external).
- **Max door weight: 80 kg** (wooden or glass doors).
- Finished wall thickness starting from 100 mm.

Note: when installed on already mounted counterframes the passage height is reduced by approx. 20 mm. In choosing the size of a pocket door systems yet to be installed you can therefore decide to:

1. use a pocket door with a standard height from the price list but lose about 20 mm of passage height
2. use a specific counterframe, specifically built 25 mm higher than standard ones

The option must be specified when ordering.

ACCESSORIES

FOR ECLISSE SLIDING DOORS

JOINING KIT FOR DOUBLE DOOR

The joining kit is a universal accessory that allows to get a double sliding pocket door system using two single systems.

Suitable for ECLISSE SINGLE and ECLISSE LUCE SINGLE, both for stud and solid wall versions.
Passage width from 600+600 to 1000+1000 mm.

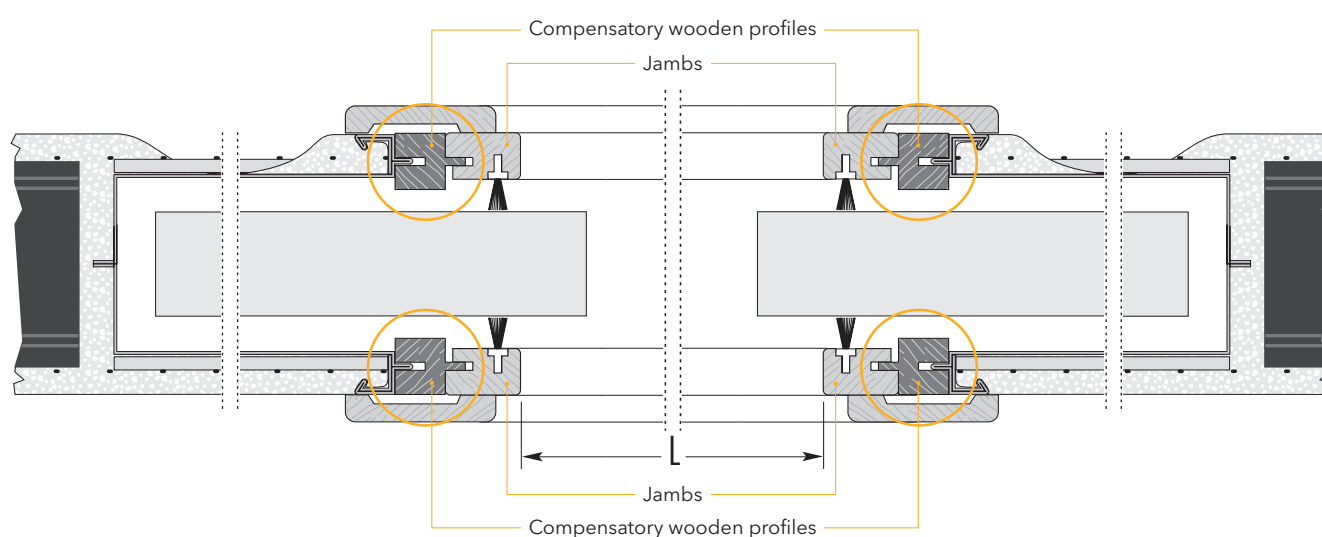

A double door system made by using 2 single systems differs from a standard ECLISSE DOUBLE or ECLISSE LUCE DOUBLE as the passage width (see "W" in the size table of the model) increases by 50 mm.
This is why finishing wooden profiles are needed.

COMPENSATORY WOODEN PROFILE

When a double sliding pocket door system is made by two single ones, the passage size increases by 50 mm. This causes the total width of the installed doors, when closed, to not cover the whole passage size: closed door panels, joining in the middle of the doorway, completely come out of their pockets, leaving an empty space between the jambs and the rear edge of the door.

The compensatory wooden profiles installed between the counterframe vertical bars and the jambs will fill the gap, reducing the passage size "L" to a standard width.

ACCESSORIES

FOR ECLISSE SLIDING DOORS

CEILING TRACK

ECLISSE developed a new sliding system that allows to divide two rooms with large opening. The multi-slide hardware set for ceiling mounted sliding door systems allows the installation of door panels up to the ceiling height.

Made of anodized aluminium, it is fixed to the ceiling with brackets and allows to give a flush finish to the ceiling. It has a decentralized door guide and door dragging system.

SINGLE

DOUBLE

TRIPLE

NOTES

- ▶ Possibility to install ECLISSE BIAS® and ECLISSE BIAS® DS.
- ▶ Available also for door panels up to 150 kg.
- ▶ Available in bars from 2000 mm to 6000 mm.
- ▶ Only for wooden doors.
- ▶ Door thickness from 40 to 44 mm.

ACCESSORIES

FOR ECLISSE SLIDING DOORS

EXTERNAL SLIDING DOOR KIT

ECLISSE also offers a sliding door kit that runs outside the wall.

Designed to save space with a sliding door without intervening on the existing wall, this kit is a functional and practical solution.

Its manufacturing technology is the same you find in all ECLISSE pocket door systems, guarantee of a tested, safe and easy to install product.

The external sliding door kit only includes the hardware components: track, runners, brackets, door stop, door guide and track fixing brackets.

Door panel and pelmet are not included.

ECLISSE CLICK

Make the most of the wall which hosts your sliding door!

This hanger can be screwed in correspondence of the horizontal bars of ECLISSE counterframes for stud wall.

Pressing one of the buttons, a hook will appear for hanging jackets, coats and hats. It can be installed flush with the wall or left protruding.

Technical Features:

- Colour: RAL 9010 white
- Dimensions: W 190 x H 102 x TH 29 mm
- Capacity: each hook can hold up to 5 kg

Note: on pocket doors with a single plasterboard layer, ECLISSE CLICK will necessarily protrude.

THREE DIFFERENT DESIGN OPTIONS

Protruding - without frame
Directly on the wall

Semi-protruding - with frame
Built in one plasterboard layer

Flush - with frame
Built in two plasterboard layers

ACCESSORIES

FOR ECLISSE SLIDING DOORS

ECLISSE PUSH&PULL

ECLISSE PUSH&PULL is the exclusive accessory for sliding pocket door systems which allows the door panel to be pulled out of the door pocket with a light pressure. This makes it easier to grip the door and makes it, therefore, handier to close.

Suitable for both wooden and glass doors, thanks to the extractable track patented by ECLISSE it can be installed on an already mounted counterframe too.

It can be combined with ECLISSE BIAS®, not with ECLISSE BIAS® DS, DOUBLE DOOR CO-ORDINATION FOR CLASSIC or DOUBLE DOOR CO-ORDINATION FOR SYNTESIS®.

ECLISSE PUSH&PULL C

ECLISSE PUSH&PULL C is suitable for models of the ECLISSE CLASSIC COLLECTION, except for ECLISSE TELESCOPIC, ECLISSE CIRCULAR and ECLISSE NOVANTA.

- Passage width for single door: 600÷1200 mm
- Passage width for double door: 600+600÷1200+1200 mm
- Maximum door weight: 50 kg

Note: double door models require an accessory for each door panel.

ECLISSE PUSH&PULL S

ECLISSE PUSH&PULL S is suitable for all sliding models of the ECLISSE SYNTESIS® COLLECTION.

- Passage width for single door: 600÷1300 mm
- Passage width for double door: 600+600÷1300+1300 mm
- Maximum door weight: 50 kg

ACCESSORIES

FOR ECLISSE SLIDING DOORS

SUPPORTS FOR ECLISSE GLASS DOORS

Brackets: standard with ECLISSE glass doors.

- Max door panel weight: 100 kg.
- Dimensions in mm:
W 100 x H 35 x THK 26
- Glass thickness 10 mm.

Note: they require two "dovetail" milling incisions on top of the door panel.

Clamps: applied directly on the glass door without any previous processing.

- Max door panel weight: 80 kg.
- Dimensions in mm:
W 145 x H 45 x THK 27
- Glass thickness 8-10 mm.

VITRO - ADAPTER FOR SYNTESIS® GLASS DOORS

Vitro is a glass door adapter for models of the ECLISSE SYNTESIS® COLLECTION that can also be used with doors not supplied by ECLISSE.

Vitro is composed of:

- a small stainless steel veil (pic.1)
- a stop jamb adapter coated in paintable PVC (pic. 2)
- two aluminium brush holders coated in paintable PVC
- a specific door guide for glass panels

The veil is available for:

- ECLISSE brackets: veil height H = 57 mm
- ECLISSE clamps: veil height H = 63 mm

ACCESSORIES

FOR ECLISSE BATTENTE DOORS

DOOR CLOSER

Completely invisible from the outside, it is installed into the door panel while the opening arm is fixed to the frame. It requires a milling to be machined on the header of the frame and on the upper edge of the door panel.

When placing the order, two specifications are also necessary:

- with or without hold open
- right-hand or left-hand

SELF-CLOSING DOOR HINGE

The new ECLISSE self-closing door hinge is a soft-closing mechanism that gently closes flush-to-the-wall wooden hinged doors. Integrated in the central hinge, it is totally concealed and it enhance the aesthetic of the door considerably. It is fitted inside the door panel and it requires a designated milling, to be machined by the installer.

Easy to install, it is adjustable in the 3 axes.

The hydraulic adjustment of the closing speed guarantees the correct closure of door panels up to 45 kg.

ELECTRIC STRIKE

The electric strike for hinged door is an access control device for opening doors via an electric impulse that unlocks the lock.

The activation mechanism (magnetic card, pushbutton, etc.) is not included.

The device requires the installation of a cylinder lock so that the door can be opened in the event of a power outage.

Jointly to the order placement, the following items are required to be included in the order:

- specifically machined door frame: product as per Price List + machining
- specifically machined door panel: product as per Price List + machining
- specific fittings, prepared for cylinder lock

Recommended in combination with a moving handle and fixed knob combination.

Note: cannot be used with frames already installed.

GENERAL WARRANTY INFORMATION

WARRANTY COVERAGE PERIOD

During the term of validity of the warranty, ECLISSE undertakes to replace/repair free of charge the components of the sliding door counterframe/frame which have manufacturing defects or were subject to breakages. The replaced components will be delivered free of charge.

PRODUCTS

- Sliding pocket door systems -

ECLISSE warranty for sliding pocket door systems has a duration of 12 (twelve) years starting from the purchase date. The validation date is the one stated in the receipt issued by the reseller or the packing slip.

The warranty is considered valid for any breakage concerning:

- 1) the metallic parts of the frame made of galvanised steel or aluminium;
- 2) running gear;
- 3) running track made of anodised 6060 aluminium alloy (10 µm).

- Frames for swing doors -

ECLISSE warranty for swing frames has a duration of 12 (twelve) years starting from the purchase date. The validation date is the one stated in the receipt issued by the reseller or the packing slip.

The warranty is considered valid for any breakage concerning:

- 1) metallic parts of the frame made of anodised aluminium.

- Frames for technical spaces -

ECLISSE warranty for frames for technical space doors has a duration of 12 (twelve) years starting from the purchase date. The validation date is the one stated in the receipt issued by the reseller or the packing slip.

The warranty is considered valid for any breakage concerning:

- 1) metallic parts of the frame made of anodised aluminium.

- Sliding doors, swing doors and accessories -

With regard to the sliding doors, the swing doors and the related accessories, it is applied the legal compliance warranty that lasts for 2 (two) years from the delivery of the goods and it must be exercised by the consumer within two months from the discovery of the defect: then, the proof of purchase (the sales receipt or till receipt) must always be kept.

ECLISSE WARRANTY

WHAT IS NOT COVERED BY THE WARRANTY

The adjustments and the customisations of the products and accessories are not included in the warranty.

This warranty does not cover:

- accidental breakages: the warranty is not applied for the following damages caused by impacts or pressures due to transportation. Similarly, the following are not covered by the warranty:
- deformations;
- structural damages due to adjustments or customisations of the products and accessories;
- aesthetic factors (e.g. bowing, bending or interventions following an incorrect laying);
- variations which are naturally subjected the materials used;
- damages due to the sun, condensation, acid rain, squirts of saltwater or other events that have corrosive effects or effects that change the materials.

ECLISSE declines any liability for losses caused directly or indirectly by incidents that do not depend on ECLISSE (e.g. industrial disputes, fires, war, acts of terrorism, restrictions to import, political insurgence, natural events, acts of vandalism and other cases of major force).

ECLISSE declines any liability for products of third parties which, even if sold or exposed together with ECLISSE products, are not covered by the warranty.

In that regard, ECLISSE carefully follows the assembly instructions mandatorily contained in all packages of manufactured products.

PROCEDURE FOR REQUESTING THE INTERVENTION DURING THE WARRANTY

In order to request the intervention during the warranty period, the final purchaser should promptly and within maximum 2 (two) months from the discovery, notify the defect only and exclusively to the authorised reseller who is bound, within 8 (eight) days, to notify ECLISSE, which will proceed with the verification of the case by taking decisions in order of the product repair/replacement request. If the reseller from which the ECLISSE product was purchased is not an ECLISSE reseller, please contact directly ECLISSE in order to request the names of the resellers closer to their domicile. The warranty period begins from the date the ECLISSE product is purchased from a ECLISSE dealer, with the original invoice or sales receipt. If the purchase date cannot be substantiated, the warranty period will begin on the date of manufacture.

ECLISSE WARRANTY

OTHER INFORMATION

The materials, components and manufacturing of the products must be kept unchanged in time and in the every day usage. To this end, ECLISSE operates within a documented Quality System compliant with the reference standard UNI EN ISO 9001 and the related regulations.

Moreover, the company has created an internal research and development team which is a promoter of voluntary testing relying on accredited institutes that perform the test in compliance with the reference standard before releasing the products on the market and which prove the full quality of a product.

Corrosion episodes through the pocket door system (perforations) are to be considered highly improbable and they are occurred only and exclusively by submitting the product to extreme situations such as the extended immersion into water or particularly aggressive chemical agents. The exclusive possibility of ECLISSE to remove the track from the pocket door system allows intervening directly on the sliding system, the only element of the structure which can be really subject to wear.

An ECLISSE product is made to last an entire life, but, if this promise is not enough, with ECLISSE, you always have the certainty of being able to replace the track, without being ever necessary to destroy a part of the wall and fully replacing the structure of the sliding system.

VOLUNTARY CERTIFICATIONS

- Sliding system

1) Sliding Runners

- Duration test (Standard UNI EN 1527)

The sliding runners with 4 ECLISSE wheels remained unchanged after 100,000 opening and closing cycles, equal to about 20 years of normal use.

- Anti-corrosion test (Standard UNI EN 1670)

The sliding runners subject to immersion into saline mist for 240 hours have obtained the maximum level of resistance to corrosion (level 4).

2) Extractable track made of aluminium alloy 6060 (Standard UNI 9006/1)

The extractable track made of 6060 aluminium alloy and protected with 10 µm anodic layer with T5 thermal treatment ensures, besides the duration in time in particularly wet environments, a surface hardness so as to allow high sliding performance of the runners.

- Pocket door system

1) Shock resistance test: (test harmonised with the standard UNI EN 1629)

A sliding door panel, of 1000 x 2100 mm dimension, inserted into an ECLISSE pocket door system (solid wall and stud wall) was subject to the impact of a 30 kg soft sack falling orthogonally from various heights.

The pocket system and its accessories remained intact, they were not subject to any damages or changes caused by the initial friction force upon opening.
